Notice

The information in this document has been funded by the U.S. Environmental Protection Agency (EPA) under Contract No. 68-C7-0011 to Science Applications International Corporation (SAIC) and its consultant. It has been subjected to the Agency's peer and administrative review and has been approved for publication as an EPA document.

Foreword

The U.S. Environmental Protection Agency is charged by Congress with protecting the Nation's land, air, and water resources. Under a mandate of national environmental laws, the Agency strives to formulate and implement actions leading to a compatible balance between human activities and the ability of natural systems to support and nurture life. To meet this mandate, EPA's research program is providing data and technical support for solving environmental problems today and building a science knowledge base necessary to manage our ecological resources wisely, understand how pollutants affect our health, and prevent or reduce environmental risks in the future.

The National Risk Management Research Laboratory (NRMRL) is the Agency's center for investigation of technological and management approaches for preventing and reducing risks from pollution that threatens human health and the environment. The focus of the Laboratory's research program is on methods and their cost-effectiveness for prevention and control of pollution to air, land, water, and subsurface resources; protection of water quality in public water systems; remediation of contaminated sites, sediments and ground water; prevention and control of indoor air pollution; and restoration of ecosystems. NRMRL collaborates with both public and private sector partners to foster technologies that reduce the cost of compliance and to anticipate emerging problems. NRMRL research provides solutions to environmental problems by: developing and promoting technologies that protect and improve the environment; advancing scientific and engineering information to support regulatory and policy decisions; and providing the technical support and information transfer to ensure implementation of environmental regulations and strategies at the national, state, and community levels.

This publication has been produced as part of the Laboratory's strategic long-term research plan. It is published and made available by EPA's Office of Research and Development to assist the user community and to link researchers with their clients.

E. Timothy Oppelt, Director
National Risk Management Research
Laboratory

Abstract

This report presents information on the cost of stormwater pollution control facilities in urban areas, including collection, control, and treatment systems. Information on prior cost studies of control technologies and cost estimating models used in these studies was collected, reviewed, and evaluated. The collection phase involved identifying, screening, and consolidating publications associated with capital costs of stormwater conveyance systems and control technologies. The resulting data were evaluated to develop a critical review of costs for urban stormwater control technologies, including identification of cost information gaps and research needs.

Contents

Foreword	iii
Abstract	iv
Figures.....	vii
Tables.....	viii
Acknowledgment.....	x
Chapter 1 Introduction	1
Chapter 2 Cost Estimation Methods-Literature Review	2
2.1 Forms of the Cost Equations.....	2
2.1.1 Single explanatory variable.....	2
2.1.2 Multiple explanatory variables	2
2.2 Pipe Costs.....	3
2.3 Manholes.....	6
2.4 Other Sewer Pipe Related Costs	7
2.5 Storage Costs	7
2.6 Multipurpose Facilities	7
2.7 Integrated Approaches	8
2.8 Process-Oriented Approaches.....	9
2.9 Stormwater Cost Optimization	9
2.10 Summary and Conclusions	11
Chapter 3 Cost Estimates for Stormwater Systems	12
3.1 Stormwater Pipelines	12
3.1.1 Pipeline installation.....	12
3.1.2 Trench excavation costs.....	14
3.1.3 Bedding costs.....	15
3.2 Manholes.....	17
3.3 Open Channels.....	19
3.4 Pump Stations	19
3.5 Pavement and Creation of Impervious Surfaces.....	19
3.6 Conclusions.....	21
Chapter 4 Cost Effectiveness of Stormwater Quality Controls	22
4.1 Objectives of Control.....	22
4.2 Control Descriptions and Construction Costs.....	22
4.2.1 Offline storage-release systems	22
4.2.2 Swirl concentrators	23
4.2.3 Screens	24
4.2.4 Sedimentation basins	25
4.2.5 Disinfection.....	25
4.2.6 Best management practices.....	25
4.3 Operation and Maintenance Costs for Controls.....	33

Chapter 5 Process-Level Cost Estimation.....	35
5.1 Case Study	35
5.1.1 Calculate the design flows into the drainage system	35
5.1.2 Sizing the sewer pipes and their slopes.....	45
5.1.3 Sewer system cost evaluation	48
5.2 Scenario Analysis.....	50
5.2.1 Management of the demand for imperviousness	52
5.2.2 Management of land use	52
5.2.3 Effect of recurrence interval	53
5.2.4 Effect of climate.....	53
5.2.5 Effect of assumed minimum inlet flow time.....	53
5.2.6 Required minimum depth of cover	53
5.2.7 Effect of pipe material	54
5.2.8 Possible number of scenarios.....	54
5.3 Results for the Selected Scenarios	56
5.4 Effect of Uncertainty in the Estimates	57
5.5 Summary and Conclusions on Scenarios	59
Chapter 6 Cost-Effectiveness of Alternative Micro-storm Management Options.....	63
6.1 Introduction.....	63
6.2 Literature Review.....	64
6.2.1 Land use/control options.....	64
6.2.2 Hydrology in SLAMM	67
6.2.3 NRCS method and initial abstraction	67
6.2.4 Costs of controls in Pitt's work.....	67
6.2.5 Control devices in SLAMM.....	69
6.2.6 Limitations of SLAMM	69
6.2.7 Low impact development.....	69
6.3 Proposed Approach.....	69
6.3.1 Introduction.....	69
6.3.2 Hydrologically functional landscaping	70
6.3.3 Cost of CN modifications	70
6.3.4 Land valuation	70
6.4 Hypothetical Study Area.....	77
6.4.1 Study area attributes.....	78
6.4.2 Unit costs	80
6.4.3 Summary of costs for each parcel.....	90
6.4.4 Summary of costs for each right-of-way	98
6.5 Estimated cost of BMP controls	98
6.5.1 Determination of runoff volumes using SCS method.....	99
6.5.2 Breakdown of calculated volumes per function.....	99
6.5.3 Estimated unit costs of various functional land use options	102
6.6 Results of BMP Optimization for Happy Acres	105
Chapter 7 Summary and Conclusions.....	106
References.....	108
